The NHET-Sim programme is a nationwide training programme for healthcare professionals and their educators aimed at improving clinical training capacity. NHET-Sim is designed for anyone who currently or intends to use simulation as an educational method to support the development of healthcare students and professionals. The programme consists of online modules and in person workshops on simulation-based education and has been developed and reviewed by leaders in the simulation field across Australia and internationally.

Thirteen modules are available under the NHET-Sim programme, two core and twelve elective allowing sites to contextualize simulation training to their needs.

**NHET-Sim Core Modules**

- C1: Simulation-based education: Contemporary issues for the health professions
- C2: Being a simulation educator

**NHET-Sim Elective Modules:**

- S1: Being a simulation technician
- S2: Simulator fundamentals
- S3: Delivering technology-based simulations
- S4: Delivering technology-based simulations
- S5: Simulated patient methodology
- S6: Patient focused simulation
- S7: Virtual environments
- S8: Simulation learning environments: Programme management
- S9: Debriefing in simulation
- S10: Developing Scenarios
- S11: Teaching with task trainers
- S12: Simulation based interprofessional education (IPE)

Detailed information on the above modules can be found at the link [https://www.monash.edu/medicine/nhet-sim/e-learning](https://www.monash.edu/medicine/nhet-sim/e-learning)
