

DIPHTHERIA

A SERIOUS SICKNESS

Diphtheria has come back in northern Australia, and there are cases in the **KIMBERLEY**.

Diphtheria is a serious sickness caused by germs.

It can make people very sick and can cause death.

THERE ARE TWO MAIN TYPES:

1. THROAT DIPHTHERIA

- Starts like a cold
- Sore throat and fever
- Grey coating in the throat or nose
- Can make it hard to breathe or swallow

2. SKIN DIPHTHERIA

- Gets into cuts, sores, or wounds
- Makes deep sores that do not heal
- Often on the legs

HOW DOES DIPHTHERIA SPREAD?

- From coughing or sneezing

- From touching infected sores

- From dirty bandages or other dirty things touching sores.

GO STRAIGHT AWAY IF YOU HAVE:

- Bad sore throat + fever

- Trouble breathing or swallowing

- Skin sores that are not healing

- Doctors need to take a swab to check for diphtheria.

HOW TO FIX DIPHTHERIA

- Special medicine to stop the poison

- Some people need to stay in hospital

- Clean skin sores every day and cover them with a clean bandage.

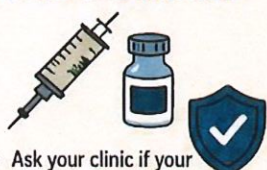

IF YOU HAVE DIPHTHERIA:

Stay away from others until you are better.

HOW CAN WE STOP DIPHTHERIA?

1. GET VACCINATED

- Ask your clinic if your DTP or dTpa needle is up to date.

2. KEEP CLEAN

- Cover coughs and sneezes, bin tissues, and wash hands with soap and water.

3. LOOK AFTER SKIN

- Keep cuts and sores clean and cover them with clean bandages.

4. IF YOU FEEL SICK – SEE THE DR OR CLINIC.

GET CHECKED. GET TREATED. STAY SAFE.
